

Preface

This Self-Directed Learning Package (SDLP) is provided to equip Medical Radiation Technologists (MRTs) with the basic knowledge to:

- Be a member of a collaborative team in the facility dealing with the introduction of, or the changing of equipment, services or processes;
- Being an effective team leader in the Diagnostic Imaging or Radiation Therapy Department;
- Help prepare the MRT for supervisory/management positions.

Everyone manages a project from time to time. As a student, you probably managed a project as part of a class assignment. Perhaps you have organized a party, or have done redecorating in your house or apartment, or arranged a trip away.

This SDLP assumes that you have no prior knowledge of managerial or technical issues around ***Project Management***.

Throughout this SDLP there are questionnaires, check lists, and self-tests. On the completion of this SDLP, you will have the basic knowledge needed of ***Project Management***.

This SDLP should take about ten (10) QA hours.
